

# United Airlines Dulles airport operation is ICELINK®'d up & Ready for the Deicing Season.

As part of the system wide digitalization phase 1 roll out of United Airlines winter ops deicing season, UALs deicing operation at Dulles upgrades to JCAII's ICELINK® deicing winter operations operating system. In what is expected to be a busy and snowy season, The Dulles Airport joins two other UAL hubs and several other operations in Phase one of the system wide digitalization of their winter operations. We are very proud to be working with United Airlines and continue working to help streamline the operation through digital coordination and connectivity. The dedicated team at UAL Dulles have been an absolute pleasure to work with.
